

INTRODUCING THE BARRICADE™ LENS FOR OUTSTANDING VAPORTIGHT PERFORMANCE

A.L.P.'s low-profile, injection-molded Sentry® Barricade™ lens features a gasket compression rib for superior sealing.

Sentry® Barricade™, A.L.P.'s new 4-ft injection-molded low-profile lens, modernizes the Sentry Series enclosed and gasketed fixture kits while maintaining the benefits of robust construction and a large compartment size to accommodate strips. In addition, the molded-in texture of the Sentry Barricade lens offers superior lamp hiding, while its new gasket compression rib results in superior sealing for extreme environments.

The Barricade Lens is available in clear acrylic, Lumieo® (frosted acrylic), and clear polycarbonate. Whether used with tube lamps or LED arrays, the clear and Lumieo options provide visual comfort while maintaining high efficacy. The clear polycarbonate version will stand up to applications requiring impact resistance and is a more economical choice than A.L.P.'s current thermoformed offering.

Suspended vaportight Sentry enclosures are suitable for wet, damp, dusty, and cold applications such as parking garages, car washes, industrial buildings, and horticultural spaces.

Applications

Parking Garages

Car Washes

Food Processing Plants

Industrial Buildings

Horticulture
